

Python String

Odin Outsourcing

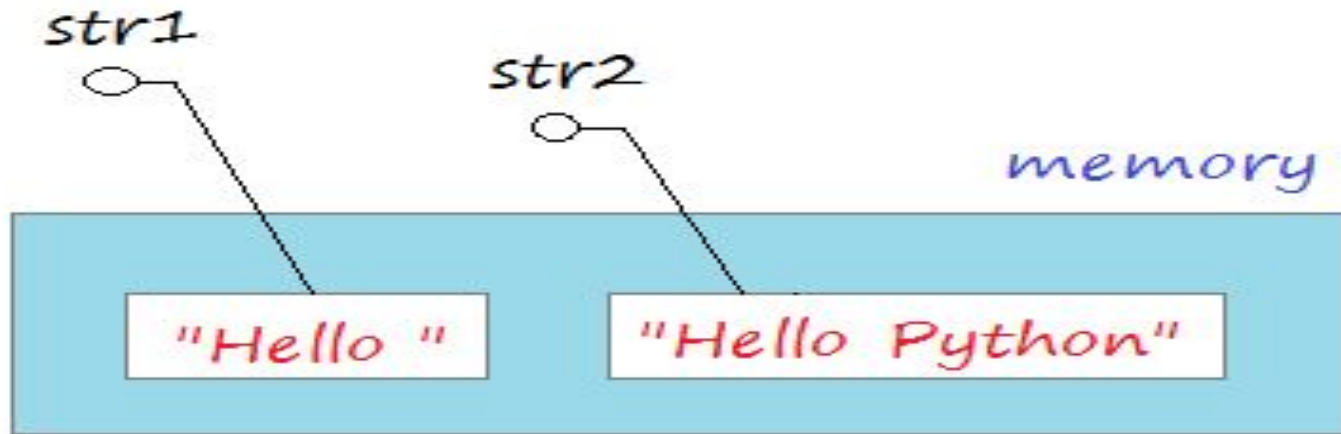

How does string work-1?

How does string work-2?

```
str1 = "Hello "
```

```
str2 = str1 + "Python"
```

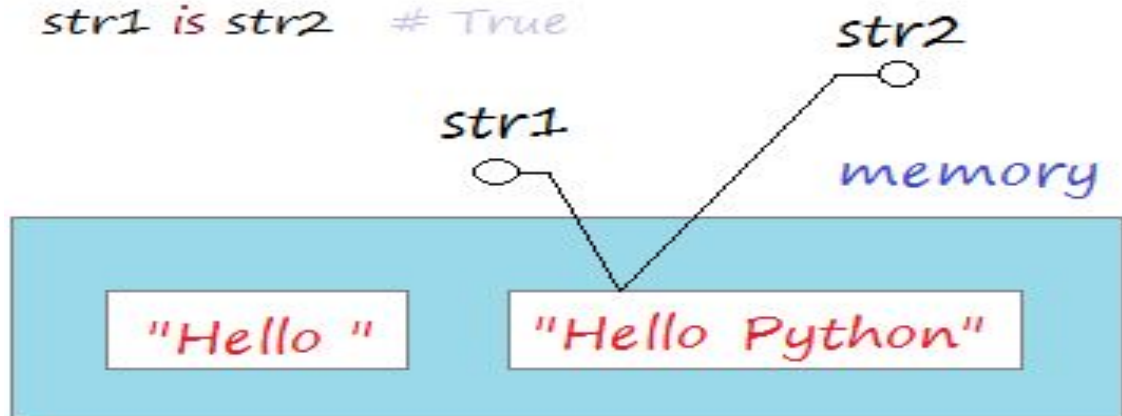

How does string work-3?

```
str1 = "Hello Python"
```

```
str2 = "Hello Python"
```

```
str1 == str2 # True
```

```
str1 is str2 # True
```

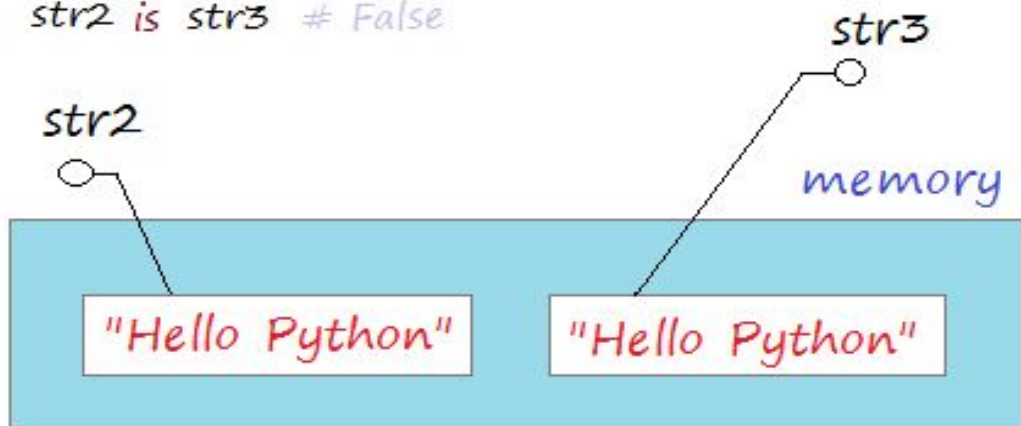

How does string work-4?

```
str2 = "Hello Python"
```

```
str3 = "Hello " + "Python"
```

```
str2 == str3 # True
```

```
str2 is str3 # False
```
